Wild Animals - II

7 - 8 - 9. soruları aşağıda verilen parçaya göre cevaplayınız.

Polar bears are big animals with their thick white fur. They live in the Arctic Zone. Their fur protects them from cold weather. They eat seals, sea birds and fish. They are excellent swimmers. They live for 20 - 30 years. They are in danger because of hunting. Ice

is also melting in the poles, so polar bears are losing their habitat. There are about 25.000 polar bears on earth. So we should do something to protect them. Firstly, we should stop hunting. Then we should do something to stop global warming such as using public transport, saving energy, planting new trees, recycling objects and etc.

7. According to the text, Polar bears - - - -.

- A) are domestic animals
